

ORGANIC SOIL CONDITIONER

TIMAC AGRO TECHNOLOGY

Our patented formulas are derived from nearly 60 years of research and development in plant extract technology. Through precise methods, our extracts are evaluated for their specific effects at each stage of crop development. By enriching selected extracts with macro- and micronutrients, we create bionutritional formulas that meet the ever-changing needs of the crop. Better yield and quality benefit our customers and are the result of improved emergence, vegetative growth, and reproductive performance.

As a company, our mission is to improve agriculture by focusing on four major areas of service to growers:

- Relentless innovation
- Flexible manufacturing
- Optimized applications
- Partners in the field

FEATURES

Humiflore is a soil conditioner proven to increase microbial activity, provide labile calcium, and improve breakdown of compost, manure and (or) stubble into plant available nutrients. As a homogeneous granule, it supplies several key nutrients, such as, calcium, magnesium and sulfur. The Pheoflore algae extract stimulates soil microbes and increases soil health. Humiflore works well on manured or composted fields, orchards, vineyards, vegetables, and fruits. It can be used alone or blended with other granular fertilizers.

KEY BENEFITS

Calcimer provides labile calcium that helps improve soil structure and feeds the crop

Delivers key nutrition of calcium, magnesium and sulfur

The Pheoflore Complex stimulates soil microbes and increases soil health to improve nutrient bioavailability

PACKAGING SIZE

- 50 lb bag
- 1,333 lb super sack

ANALYSIS

Calcium (Ca)..... 20%
Magnesium (Mg)4%
Sulfur5%

Derived from marine calcium carbonate, calcium sulphate, magnesium carbonate, magnesium sulphate.

APPLICATION

Broad acre application will often call for 100 to 200 lbs/acre. Tree fruit and vegetable production will normally require 200 to 400 lbs/acre to more intensively increase soluble calcium. Humiflore can be blended with fertilizers or applied alone. Please refer to soil tests and the advice of your Timac Agro sales representative for specific recommendations.

ORGANIC SOIL CONDITIONER

Improved Calcium Availability

Humiflore is manufactured using our exclusive marine-based mineral called **CALCIMER**. This highly-soluble material provides quicker release of calcium compared to limestone. This is due to its unique microscopic structure.

CALCIMER

VS.

Traditional Lime

Pheoflore Effects on Proteolytic Bacteria Growth

Pheoflore Effects on Cellulolytic Bacteria Growth

Pheoflore improves the activity of cellulolytic and proteolytic bacteria, microorganisms responsible for the degradation of raw and broken down organic matter.
